

The Impact Brought by the U.S. Sanction on Huawei, please start to choose Hi Sharp's "Non-Hisilicon" Video Surveillance Products

Security News

Huawei Risks:

Huawei is subject to the U.S. NDAA government ban and has been 'red flagged' on the United States "entity" list. In addition to cybersecurity concerns, Huawei now faces supply chain barriers that could impact their ability to produce many products such as Hisilicon chips.

U.S. ceases doing business with the Chinese company, for it is national security risk.

Huawei needs software from U.S. firms that outsourced production to TSMC. After the ban announced, TSMC decided to stop doing business with Huawei.

This made it impossible for Huawei's HiSilicon chip division to keep making processors for its products, including phones and products.

The Commerce Department said foreign foundries would be granted a 120-day grace period for chips already in production.
